OBJECTIVE

Detail-oriented Computer Science engineering student with strong analytical foundations and hands-on project experience in full-stack and applied machine learning. Seeking a fresher software engineering role to contribute technical skills, gain professional industry exposure, and build reliable software systems.

TECHNICAL SKILLS

Programming Languages:	Python, Java, C++, JavaScript, SQL
Frameworks & Web:	Flask, React.js, FastAPI, Node.js, HTML5, CSS3
Databases & Cloud:	MySQL, PostgreSQL, AWS Fundamentals, Docker
Developer Tools:	Git, GitHub, VS Code, Linux Shell, Postman
Soft Skills:	Team Collaboration, Technical Documentation, Critical Thinking, Agile Workflow

EDUCATION

B.Tech – Computer Science & Engineering (AI / ML) **[2022 – 2026]**
[University / Engineering Institute Name, City, State] — *CGPA: [8.93 / 10.0]*

Higher Secondary Certificate (10+2 – MPC / Science) **[2020 – 2022]**
[Junior College Name, City, State] — *Score: [92.5%]*

INTERNSHIP EXPERIENCE

Java Fullstack Developer Intern — *[Technology Academy / Partner Organization]* **[Dec 2025 – Present]**

- Undergoing intensive hands-on training in core Java OOP design, database schema design, and modular MVC architecture.
- Developing full-stack CRUD applications integrating frontend responsive forms with relational MySQL database backends.

Artificial Intelligence & ML Intern — *[Corporate AI Program / Research Lab]* **[Apr 2025 – May 2025]**

- Developed an NLP-based fake news classification pipeline using TF-IDF vectorization and Scikit-Learn models, achieving 92% test accuracy.
- Designed and deployed a lightweight Python Flask ML API enabling real-time headline evaluation and sub-100ms prediction latency.
- Performed extensive text preprocessing, tokenization, and cross-validation to minimize false positive classifications.

ACADEMIC & TECHNICAL PROJECTS

Secure E-Voting System with Facial Recognition & Blockchain | *React.js, Python Flask, OpenCV, SQLite*

- Architected a full-stack electronic voting web application using React.js for interactive client UI and Flask REST API for ballot processing.
- Engineered multi-factor voter registration verifying credentials against secure database records with one-time verification tokens.
- Implemented biometric authentication via Facial Recognition (OpenCV / DeepFace), ensuring voter verification via live webcam stream.
- Built a custom distributed ledger in Python to cryptographically link and immutably record cast votes, ensuring transparent auditability.

Campus Technical Forum Web Portal | *Python, Flask, Jinja2, Bootstrap, SQLite*

- Developed a responsive web portal facilitating peer project reviews, event registrations, and study resource sharing across 500+ student users.
- Designed normalized relational database schemas with SQLite, implementing role-based authentication and secure session handling.

ACHIEVEMENTS, LEADERSHIP & CERTIFICATIONS

- **President – Technical Clubs Council:** Spearheaded 5+ technical workshops and coding competitions managing 500+ student participants.
- **Head of Operations – Developer Student Forum:** Coordinated logistics, speaker sessions, and hackathon judging panels.
- **AWS Academy Cloud Foundations:** Certified in foundational AWS cloud infrastructure, security, and computing architectures.
- **Python for Data Science (Kaggle / AICTE):** Completed certified coursework in structured data analysis and predictive modeling.
